Abstracts

Dry ice blasting is a clean form in which dry ice particles are pushed to the contaminated surface at very high speeds. This is similar to sand blasting, plastic bead blasting or soda blasting. The difference is that dry ice blasting does not produce secondary waste or chemical residues and is non-abrasive, non-conductive, non-flammable and non-toxic. It reduces or eliminates the risk of employees coming into contact with chemicals and is an environmentally friendly cleaning method. Based on the Dry Ice Cleaning market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
