Abstracts

Dyes are colored substances applied in the form of an aqueous solution on various substrates. These are used as colorants in different industrial applications such as food processing, printing inks, wood stain, textile processing, and others. Dyes have high selective absorptivity for liquids as well as substrates as compared to other color-imparting materials such as pigments. Excellent absorption characteristics of dyes enable them to lose their physical and structural properties during their application on substrates. Low resistance to light and reduced shelf life are some of the other distinct features of dyes. Thus, they are generally used in surface coating, food, and printing applications that require high transparency levels for manufacturing finished products. Dyes can be classified on the basis of their solubility in a particular medium or substrate as basic dyes, fat-soluble dyes, and metal complex dyes.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Dyes market covering all its essential aspects.
