## Abstracts

Electronic cigarette (e-cigarette) is the most common prototype of electronic nicotine delivery systems. The e-cigarette heats up a cartridge of the solution and produces vapor inhaled by the user. Vaping is the act of inhaling and exhaling the aerosol, often referred to as vapor, which is produced by an e-cigarette or similar device. Generally a vaping device consists of a mouthpiece, a battery, a cartridge for containing the e-liquid or e-juice, and a heating component for the device that is powered by a battery.
