Abstracts

E-passports are mainly used to authenticate the identity of a traveler during international travels. This technology stores data about the traveler on a smart chip, which bears a unique identification number and a digital signature. Its use is more secure than traditional paper technology, as it reduces the risk of data duplication and alteration. The data stored electronically on the chip is authenticated by public key infrastructure (PKI), which helps eliminate forgeries. Fingerprint, facial, and iris recognition are the major biometric modalities used in this technology. Increase in thefts, illegal immigration, and transborder crimes fuels e-passport market.

Based on the E-Passport market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the
