## Abstracts

E-waste is short for electronic waste. That is, trash generated from broken, obsolete, and surplus electronic devices. These electronic products often contain toxic chemicals and hazardous materials. E-waste recycling refers to the reprocessing and reuse of this e-waste. This is a process that seeks to recover materials from e-waste. As e-waste recycling and resource collection rates increase, companies can reuse existing metals and materials instead of mining precious metals from the earth. E-waste recycling refers to the recycling of electrical and electronic devices such as TVs, air conditioners, computers, mobile phones, laptops, DVDs, oven, microwave, fans, heaters, toasters, to securely extract raw materials such as metals, plastic, glass, and mercury, and reuse these materials and devices.
