## Abstracts

Earth observation satellites are designed for non-military purposes, such as monitoring and predicting climate models, assessing damage during natural disasters, estimating crop yields, surface geological mapping and mineral deposits, and availability of water sources. It uses remote sensing technology to collect chemical, physical and biological data from the Earth system at an altitude of 800 km. This method allows the use of high resolution cameras and advanced sensors to measure the geological parameters of the world from orbit. It promotes the management of the Earth's natural resources in a resource-rich manner.

Based on the Earth Observation Satellite market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
