## Abstracts

Electric Drive Trucks are becoming an alternative to traditional trucks, while creating no local pollution. Due to the high efficiency of electric power trains, running costs are expected to be lower. Their simplicity is also supposed to make maintenance costs much lower.

However, Electric Drive Trucks are usually heavier than diesel trucks, the energy density of lithium ion batteries is far less, so very long range trucking requires recharging en route, causing delays, or the swapping of tractor units.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Electric Drive Trucks market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation. Further, mergers & acquisitions, emerging market trends, the impact of COVID-19, and regional conflicts will all be considered.

In a nutshell, this report is a must-read for industry players, investors, researchers, consultants, business strategists, and all those who have any kind of stake or are planning to foray into the market in any manner.
