Abstracts

Electric Drive Trucks are becoming an alternative to traditional trucks, while creating no local pollution. Due to the high efficiency of electric power trains, running costs are expected to be lower. Their simplicity is also supposed to make maintenance costs much lower.

However, Electric Drive Trucks are usually heavier than diesel trucks, the energy density of lithium ion batteries is far less, so very long range trucking requires recharging en route, causing delays, or the swapping of tractor units.

Based on the Electric Drive Trucks market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the

country-wise government.
