## Abstracts

Electric utility vehicle powertrains consist of a bank of deep-cycle batteries that provide the “fuel” to run a DC electric motor that drives a transaxle and propels the wheels. Deep-cycle batteries are different from the standard lead-acid battery used to start your car and are designed to provide a steady supply of current over a long period of time. Range before recharge can be a consideration if you cover a lot of ground. Unlike a gasoline vehicle that can be refueled in a few minutes, recharging an electric vehicle will take several hours.

Based on the Electric Utility Vehicles market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
