An electric vehicle (EV) is powered by an electric motor for propulsion. An electric vehicle uses a battery to store energy, which is supplied to the electric motor through a controller. The controller regulates the energy flow from the battery to electric motor based on the power requirement. An Electronic Control Unit (ECU) can know the battery condition, the unit measures the voltage, current, temperatures, etc., of the battery module and monitors inputs and outputs to and from the battery. Furthermore, it also executes the management to cool the battery and monitors the high-voltage safety circuit, thereby ensuring safe and efficient use of the battery pack.
