Abstracts

The electric vehicle battery is recycled, and the metal part can be recycled and reused. The whole battery is divided into waste acid liquid, grid, lead paste, waste plastic and waste partition. The acid is reused after being treated in the wastewater treatment tank; the grid can be directly alloyed or crude lead by low-temperature melting; the sulfur-containing lead paste is desulfurized by desulfurization pretreatment technology, and then fire, wet or wet, respectively. Joint technology restores lead; plastics are washed and sold as a by-product of this mechanical operation.
