Abstracts

The ESD uses electrotherapy technology that causes muscle contraction with the help of electrical impulses. The device is used to treat muscle weakening when affected by various neurological disorders and injuries. It consists of lead wires and electrodes placed on the skin over the target area. Its function is to activate electrical impulse and transmit a signal to the electrode due to which depolarization of sensory nerves takes place, resulting in pain reduction and improvement of muscular strength.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Electrical Stimulation Devices (ESDs) market covering all its essential aspects.
