## Abstracts

Electrocatalytic oxidation water treatment is a green water treatment technology, which enables strong oxidizing substances (represented by hydroxyl radical  $\cdot\text{OH}$ ) generated on the anode surface to fully contact and react with organic molecules in solution, so that organic molecules are gradually oxidized and decomposed until carbon dioxide and water are formed. Electrocatalytic oxidation water treatment has the advantages of fast reaction, high decolorization rate, less sludge, convenient management and easy automatic control. Under the electrochemical action, the physical and chemical properties of sewage can be changed to make it harmless, and the pressure and current can be adjusted for control to ensure the stability of production water, while the concentration of pollutants in raw water changes.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Electrocatalytic Oxidation Water Treatment market covering all its essential aspects.
