Abstracts

Electroconductive Carbon Black is a kind of high-performance carbon black, which can endow materials with better technical indexes such as strength and toughness, and its resistivity is much smaller than that of ordinary carbon black. The conductive network formed by adding insulating polymers (plastics and rubbers) can significantly reduce the volume resistivity of plastics and rubbers originally used as insulators, and can endow products with conductive or antistatic effects.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Electroconductive Carbon Black market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation.
