Abstracts

Electromagnetic Surgical Navigation System is a kind of surgical navigation system, which can offer the patient preoperative or intraoperative image data and the operative bed patient's anatomical structure corresponding accurate, operation tracking of surgical instruments and the position of the surgical instrument in the patient image in real-time updates on the form of the virtual probe display, make the doctor of surgical instruments relative to patient anatomy structure at a glance, make surgery more rapid, more accurate and safer.

Electromagnetic Surgical Navigation System generally includes three magnetic field generators and one magnetic field detector. The advantage of Electromagnetic Surgical Navigation System is low cost, convenient and flexible, no blocking problem of the light path between the detector and the generator. The disadvantage is that Electromagnetic Surgical Navigation System is very sensitive to the metal objects, especially for the ferromagnetic instrument in the surgical area. Because of the operation room has monitor, anesthesia machine and other equipment, so a large number of multi frequency electromagnetic wave can influence the accuracy and reliability of electromagnetic navigation.

Based on the Electromagnetic Surgical Navigation System market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields

are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
