Abstracts

Electronic waste or e-waste describes discarded electrical or electronic devices. Used electronics which are destined for reuse, resale, salvage, recycling, or disposal are also considered e-waste. Informal processing of e-waste in developing countries can lead to adverse human health effects and environmental pollution. Electronic recycling helps to recover precious metals by ensuring that toxic and hazardous substance are handled properly thereby minimizing the environmental impact associated with mining. Even though recycling of e-waste pose clear benefits, lack of recycling awareness and regulatory infrastructure have resulted to low recycling rate.

Based on the Electronic Recycling market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
