Abstracts

An electronic shelf label (ESL) system is used by retailers for displaying product pricing on shelves. Typically, electronic display modules are attached to the front edge of retail shelving. These modules use electronic paper (E-paper) or liquid-crystal display (LCD) to show the current product price to the customer. E-paper is currently trending in the ESL market as it provides crisp display and supports full graphic imaging, although these devices are considerably more expensive than the LCD-based ESL devices.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Electronic Shelf Labels (ESL) market covering all its essential aspects.
