Abstracts

E-waste consists of unwanted or broken electronic or electrical devices, and peripherals such as smartphones, televisions, laptops, refrigerators, computers, printers and other electronic products. The ever-rising problem of e-waste is being solved with the use of electronic recycling. Most electronic products are made up of metals, which are recyclable. The dismantling and recycling of end-of-life electronic products promotes the conservation of undamaged natural resources. Moreover, electronic recycling helps in minimizing the air and water pollution that is common in the disposal and landfilling of e-waste. Electronic recycling consists of three main processes: collection, pre-processing, and end-processing.
