## Abstracts

Embedded analytics come with the aim of offering analysis of data and higher accessibility of business intelligence to the various users of a company. Traditional business intelligence or analytics is basically aimed at the extraction of data and accomplishing the very basic level of analysis. However, those applications are rarely capable of providing solution of high level analytic problems. Embedded analytics offers assistance in solving such problems because they are capable of offering an analysis of large quantities of multi domain data and deriving business specific data from the same. It is also being offered as an in-built part of most of the business applications like enterprise resource planning (ERP) and customer relationship management (CRM) amongst many others.

Based on the Embedded Analytics market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
