## Abstracts

CCD (Charged Coupled Device), CCDs are sensors used in digital cameras and video cameras to record still and moving images.

Electron-multiplying CCD (EMCCD) technology, is designed to beat down the intrinsic electronic noise of the readout process, which is comparable to a signal of a few photons per exposure. In this way, EMCCD cameras address the challenges of most low light imaging. They also support faster frame acquisition rates than their CCD counterparts, making them highly suitable for live imaging. Better still, EMCCD cameras can offer ultimate sensitivity for the observation of the darkest scenes by becoming wide-field real-time photon-counting imaging devices.

Based on the EMCCD & CCD Cameras market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
