Abstracts

EMV — the acronym for Europay, Mastercard and Visa — is the global standard for cards equipped with computer chips and technologies for verifying chip card transactions.

An EMV card is simply a smart card (also known as a chip card or IC card) that is used to store and verify data on an integrated circuit. Unlike a magnetic stripe card, each time an EMV card is used for payment, the card chip creates a unique transaction code that cannot be used again. It includes credit cards, debit cards, prepaid cards, contactless cards, etc.
