Abstracts

Endoscopy Visualization Systems is a device used to examine the internal organ structure of the human body. Endoscopy Visualization Systems can provide high-definition visualization of endoscopic images, enabling surgeons to see tissues and anatomy that are indistinguishable from traditional surgical views without having to make incisions large enough to allow the surgeon's hand to enter the surgical field. Therefore, it is mainly used as an auxiliary tool in the medical field. Endoscopy Visualization Systems includes a camera, a monitor, a light source and a display, etc.
