Abstracts

Epidermolysis Bullosa (EB) is a category of rare genetic disorders involving the skin and skin-like tissues. EB is generally inherited from one or both parents who have been diagnosed with EB or carry as mutated EB gene. Rarely, EB can also occur in an individual due to a new genetic mutation, which might have been absent in either or both parents. People suffering from EB have fragile skin which causes blisters that can lead to wounds which are difficult to heal. Low prevalence, lack of data, and no available medications make EB a non-curable disease. A Severe form of EB can be a cause of cancer. At present EB is categorized into EB simplex, Junctional EB, Dystrophic EB, and Kindler Syndrome.
