Abstracts

Ethylene is a colorless flammable gas with a musky odor. It is the simplest alkene and unsaturated hydrocarbon after acetylene. It is extensively used in agriculture as a plant hormone to ripen fruits; it is also used in the chemical industry to produce ethyl benzene, polyethylene, ethylene dichloride, and ethylene oxide among others. The ethylene production methods include steam cracking of paraffinic hydrocarbons or by separation from refinery gas. Industrial reactions of ethylene include alkylation, halogenation, polymerization, oxidation, hydro halogenation and others.

Based on the Ethylene market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
