Abstracts

Polytetrafluoroethylene or PTFE was accidentally discovered in 1938 by an employee of DuPont, an American chemicals manufacturer. This thermoplastic polymer was found to have unique properties to resist friction, temperature, chemical degradation, mechanical action and electrical charge. Today, PTFE technology can be found in a wide range of applications, from high-tech aerospace mobility enhancing dry film lubricant, to non-stick frying pan surfaces. Other applications include self-lubricated PTFE used in moving machinery, high performance films, protective fabrics against environmental hazards (such as chemical and microbial attack) medical devices and filter materials (media).
