Abstracts

Explosion proof equipment does not mean that products will be able to withstand any explosion. Instead, it means that products will contain any source of an explosion within its housings. The term 'explosion proof' also does not indicate, that the product is capable of withstanding an internal explosion without allowing flames or hot gases to escape or trigger an explosion in the surrounding atmosphere. A broader term that can be assigned to these products is explosion protection equipment. This equipment contains in itself various protection principles, like explosion prevention by limiting the operating energy, explosion proof by making the housing robust to withhold any explosion inside itself, and explosion segregation by isolating the source of an explosion inside a protective medium.

Based on the Explosion-Proof Equipment market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
