Abstracts

Explosion Proof Motors are distinguished by high material quality, robust design, high index of IP protection, bearings greased for life, weather and corrosion resistant final overcoat, and high dielectric strength insulation system intended to be feed by static frequency converter. Danger of explosion is always present in mining and many other sectors of industry, such as chemical industry, refineries, on oil rigs, fuel pumps, food processing industry and waste managing companies. A risk of explosion is always present when gases, vapours, mists or dusts mix with air in explosive ratio near ingnition source, so that there is possibility of releasing of so-called minimum ignition energy. Explosion proof equipment is designed in various types of protection, in such a manner that, when properly used, it can prevent explosion if properly applied.

Based on the Explosion Proof Motors market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
