Abstracts

Fan guards are used to provide a physical barrier around spinning fan blades to prevent accidental contact with fingers or other objects. They are typically constructed using metal wire or plastic. Fan guards are manufactured in a variety of configurations which depend upon the degree of accessibility required and the shape of the fan blades themselves. Fan guards are designed to maximize air flow while minimizing noise. Some fan guards are assemblies that include filter media intended to reduce passage of dust particles and other contaminants through the fan into enclosures. Mounting options include through-hole types secured by screw or bolt, and snap-on varieties that attach directly through application of a pushing force.
