## Abstracts

The most common use of the term 'tractor' is for the vehicles used on farms. The farm tractor is used for pulling or pushing agricultural machinery or trailers, for plowing, tilling, disking, harrowing, planting, and similar tasks. A farm tractor used to power a pump for irrigating a plot of land. A variety of specialty farm tractors have been developed for particular uses. These include 'row crop' tractors with adjustable tread width to allow the tractor to pass down rows of corn, tomatoes or other crops without crushing the plants, 'wheatland' or 'standard' tractors with fixed wheels and a lower center of gravity for plowing and other heavy field work for broadcast crops, and 'high crop' tractors with adjustable tread and increased ground clearance, often used in the cultivation of cotton and other high-growing row crop plant operations, and 'utility tractors', typically smaller tractors with a low center of gravity and short turning radius, used for general purposes around the farmstead. Many utility tractors are used for nonfarm grading, landscape maintenance and excavation purposes, particularly with loaders, backhoes, pallet forks and similar devices. Small garden or lawn tractors designed for suburban and semirural gardening and landscape maintenance also exist in a variety of configurations.
