## Abstracts

Fermented foods belong to a category of foods called functional foods that are known to have a positive effect on health. Probiotics are the bacteria used to ferment traditional foods. Thus, fermented foods and probiotics are closely related and co-exist due to the health attributes associated with their intake. However, the efficacy of probiotics is enhanced when taken in the form of fermented food rather than as probiotics alone. The gaining popularity of probiotics leads a growth of functional food and beverage market which in-turn is driving the fermented food and drinks market.
