## Abstracts

Ferric chloride is an industrial scale commodity chemical compound, with the formula  $\text{FeCl}_3$  and with iron in the +3 oxidation state. The colour of ferric chloride crystals depends on the viewing angle: by reflected light the crystals appear dark green, but by transmitted light they appear purple-red. Anhydrous ferric chloride is deliquescent, forming hydrated hydrogen chloride mists in moist air. It is rarely observed in its natural form, the mineral molysite, known mainly from some fumaroles.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Ferric Chloride Powder market covering all its essential aspects.
