Abstracts

Polyferric Sulphate and Ferric Sulphate are iron based coagulants. Coagulants are the chemicals used for the primary treatment of sludge. They destabilise the particles by neutralising the charge on the particle with charges opposite to those of the suspended solids. Once the charges are destabilised, the particles are capable of sticking together. Ferric and polyferric sulphate is mainly used by different industries to treat waste water. These chemicals are used to assist with the removal of colour and turbidity present in untreated, raw water. They do this by forming particles in the form of flocs, which are then removed during downstream clarification or filtration treatment processes.

Based on the Ferric Sulphate and Polyferric Sulphate market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
