Abstracts

A ferrite is a ceramic material made by mixing and firing large proportions iron oxide (Fe_2O_3 , rust) blended with small proportions of one or more additional metallic elements, such as barium, manganese, nickel, and zinc. They are both electrically non-conductive, meaning that they are insulators, and ferrimagnetic, meaning they can easily be magnetized or attracted to a magnet.

Ferrite powders are used in the coatings of magnetic recording tapes. One such type of material is iron oxide.
