## Abstracts

Magnetic materials produce a magnetic field around it, which is invisible in nature. It attracts iron and repels other magnets. Cobalt, iron, nickel, some minerals that are obtained naturally such as lodestone, and a few alloys of rare earth metals can be magnetized and get powerfully attracted to a magnet known as ferromagnetic materials. In production and distribution of electricity, the magnetic materials are used. These material are used in numerous applications, it is the chief component of many electronics and electrical devices. Permanent magnets are able to magnetize as it creates its own continual magnetic field which is used to hold notes on a refrigerator door.

The Ferromagnetic Materials market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
