## Abstracts

One of eight primary systems in a building. Also referred to as the "fire protection system". The fire safety system monitors, detects and suppresses fire hazards. The fire safety system is in some ways analogous to the autoimmune system of the human body, which removes bacteria and viruses from the human body. The fire safety system overlaps both the electrical and mechanical systems in the following ways

Fire detection equipment (such as heat and smoke detectors) is often classified as electrical components; Fire suppression equipment (such as pumps and sprinklers) is treated as part of the mechanical domain. Suppressing fires and controlling smoke transmission is a type of autoimmune response. The system also includes

components to facilitate the efficient evacuation of people from the premises, such as exit signs and emergency lighting. The fire safety system is akin to the auto-immune system in the human body.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Fire Safety Systems market covering all its essential aspects.
