Flame retardants are the chemicals added to different material such as fabrics, plastics, etc. to increase their resistance to ignition, reduce flame spread & suppress smoke. In plastic industry, these chemicals are added during masterbatches formulation and then incorporated as additives with different polymers such as polyolefins, polycarbonate, polyamides, polyester & other polymers. Flame retardants are available in different types such as alumina trihydrate, antimony trioxide, phosphorus flame retardants and so on, that are added to masterbatches with other additives depending upon the requirements to provide them flame resistance and other necessary property such as smoke and flame reduction. Masterbatches are raw compounds of plastic that consist of high coloring pigments and additives. These are used to color plastics and to impart other essential properties to the materials. Flame retardant masterbatches are a type of masterbatches formulated to prevent detonation or spread of the flame when added to plastic products.

The Flame Retardant Masterbatch market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
