Abstracts

Flare Monitor is used to control the combustion efficiency of a flare flame and to prevent smoking conditions from occurring. It provides an output signal over a scale of 0 to 2000. When the flame is smoking, the output signal is above 1300. When the signal is below 700, then a low combustion efficiency is indicated. A signal between 700 and 1300 indicates a high combustion efficiency and a non-smoking flame.
