Abstracts

A flexible pipe has a composite construction of layers of various materials that enable large amplitude deflections without causing damage to the pipe. It comprises leakproof thermoplastic barriers and corrosion-resistant steel wires, which gives the pipe high-pressure resistance, flexibility, and superior dynamic behavior. The most common design of Flexible Pipe is an unbonded structure, in which each component forms a cylindrical layer, and the relative sliding between the layers makes the pipe flexible. Generally speaking, Flexible Pipe includes skeleton layer, inner lining layer, compressive armor layer, wear-resistant layer, tensile armor layer, thermal insulation layer and outer cladding layer.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Flexible Pipe market covering all its essential aspects.
