Abstracts

Floating solar or FPV (floating photovoltaic) refers to a series of solar panels on a structure that floats on a body of water, usually an artificial basin or lake. The main advantage of floating PV plants is that they do not occupy any land, except for the limited surface required for the connection of the electrical cabinet to the grid. Their prices are comparable to those of onshore plants, but they provide a good way to avoid land consumption.

Based on the Floating PV Plant market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
