Abstracts

The flow computer devices are used in the oil and gas industries for the measurement of liquid and gas supplies. Flow computers take inputs from flow meters, temperature transmitters, and pressure transmitters, and then calculate exact flow of liquid or gas running through the pipelines. It calculates the exact amount of flow with the help of the interfaced devices and records the data, important events, and alarms. Then, that data is transferred to external computers or workstations for inspecting, managing, and accounting.
