Abstracts

The monitor can be used to project water or fire fighting foam (or in some cases even dry chemical powder). Water monitors typically only project water, while foam monitors can be used to project water and foam. Projectors that project foam require special nozzles that allow for the induction of foam concentrate (and in the case of inhaled foam nozzles, the growth of the foam solution). Therefore, the difference between water and foam monitors is primarily due to the nozzles mounted on the monitor body (and the monitor body is common to both).
