## **Abstracts**

High pressure processing (HPP), also known as pascalization, is a technology used in the sterilization of a wide range of food products. HPP is a type of freezing pasteurization in which the products are introduced into a container subjected to close to the maximum level of isostatic pressure exerted by water. The high pressure eliminates the bacteria, yeast, molds, parasites, and viruses present in the food, extending the life of the product and guaranteeing its safety.

Based on the Food High Pressure Processing (HPP) Equipment market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
