Abstracts

Freeze drying is a drying process commonly used to preserve perishable materials. It is also known as lyophilization or freeze drying. The method includes removing all moisture content from the material by drying and freezing. This prevents the growth of fungi and bacteria and preserves the product for longer storage times under anhydrous conditions. The process equipment includes vacuum pumps, cryogenic liquid storage, freezing and vacuum chambers, piping and nozzles, and various sensors that help implement the process. Modern technology is being used in freeze-drying processes, replacing traditional techniques for its effectiveness and efficiency.
