## Abstracts

The fresh air system is an independent air treatment system consisting of a supply air system and an exhaust air system. It is divided into a ducted fresh air system and a ductless fresh air system. The pipeline fresh air system consists of new fans and pipe fittings. The new air is used to purify the outdoor air into the room, and the indoor air is discharged through the pipes. The non-pipe fresh air system is composed of new fans, and the outdoor air is also purified by the new fan.
