Abstracts

Pectin is a naturally occurring soluble fiber, structural heteropolysaccharide, which is usually found in apples, lemons, oranges, berries, and other fruits. Unripe fruits generally have more pectin than ripe fruits. Pectin is commercially manufactured as brown powder, extracted primarily from citrus fruits. Pears, apples, guavas, quince, plums, gooseberries, and citrus fruits such as oranges contain large amount of pectin, while soft fruits such as cherries, grapes, and strawberries contain less amount of pectin. Pectin is primarily used as a gelling and thickening agent and stabilizer in a number of fruit products, such as marmalades, fruit-based preparations such as yogurts, drinks, ice creams, desserts, and bakery products.

Based on the Fruit Pectin market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
