Abstracts

A fusible plug is a threaded metal of cylinder usually of bronze, brass or gunmetal, with a tapered hole drilled completely through its length. This hole is sealed with a metal of low melting point that flows away if a pre-determined, high temperature is reached. The initial use of the fusible plug was as a safety precaution against low water levels in steam engine boilers, later applications extended its use to other closed vessels, such as tanks for transporting corrosive or liquefied petroleum gasses and so on. The market size in this report only includes fusible plugs sold externally, fusible plugs integrated in gas cylinders, boilers, etc. are not within the scope of this report.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Fusible Plug market covering all its essential aspects.
