Abstracts

In power electronics, a power device is a semiconductor device that acts as a switch or rectifier; for example, a switched mode power supply (SMPS). Power devices using gallium nitride (GaN) as a semiconductor material are referred to as GaN power devices. GaN power devices reduce the overall energy loss of the system. Unlike conventional transistors that require a larger chip area to reduce on-resistance, GaN devices offer compact dimensions, thus providing high speed switching and dimensional shrinkage of the entire system.

Based on the Gan Power Device market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
