Abstracts

In order to ensure the quality of power supply and reduce line loss, the substation equipment is required to be close to the user. Therefore, substations are mostly located on the ground floor of high-rise buildings, requiring transformers to be disaster-free (fireproof, etc.). Dry-type transformers can meet this requirement. SF6 gas-insulated transformers are born under such demand. It can be combined with SF6 circuit breakers to form a fully-sealed, fully self-protected complete set of substation devices, replacing fire and explosion-proof transformers. Electric house. As a new type of disaster-proof transformer, gas-insulated transformers have been developed over 30 years, and commercialized mass production has been realized.

Based on the Gas Insulated Transformer market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
