## Abstracts

Direct Gasoline Injection (GDI) (also known as gasoline direct injection, direct gasoline injection, spark ignition direct injection (SIDI) and fuel stratified injection (FSI)) is a fuel injection form used in modern two-stroke and four-stroke. - Stroke gasoline engine. Gasoline is high pressure and is injected directly into the combustion chamber of each cylinder through a common rail fuel line, as opposed to conventional multi-point fuel injection that injects fuel into the intake or cylinder ports. Direct injection of fuel into the combustion chamber requires high pressure injection, while low pressure is used to inject into the intake or cylinder ports.

Based on the Gasoline Direct Fuel Injector market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
