Abstracts

GIS is a computerized system that connects data with geography. Several decisions are taken using GIS, right from tracking a store location to predicting climate change and analyzing a crime pattern. A GIS helps users to link the data with geographic location to gain spatial insights from the extracted data. The growing integration of GIS with conventional technologies has enhanced the business intelligence of companies. Moreover, the integration of GIS with IoT devices provides accurate data to users using geospatial data analysis. For instance, an IoT-enabled valve can be monitored from anywhere around the globe using geospatial data.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Geographic Information System (GIS) market covering all its essential aspects.
